

Abhishek Gopalakrishnan Unnithan

Location: San Jose, CA (Open to Relocation) | **Phone:** (857) 350-2419 | **Email:** abhishekunnithan@gmail.com
Portfolio: github.com/abhishek98-force | **LinkedIn:** linkedin.com/in/abhishek-unnithan-095284185

SKILLS

- **Languages:** Python, Java, TypeScript, JavaScript, SQL, HTML5, CSS3
- **Backend and APIs:** FastAPI, Flask, Spring Boot delivery, REST APIs, microservices, SQLAlchemy, SQLAlchemyModel
- **Frontend:** React, Vite, Konva, Lightning Web Components
- **Data and Testing:** PostgreSQL, TimescaleDB, Alembic, pytest, JSON Schema, AJV, RabbitMQ
- **Cloud and Delivery:** Docker, AWS, Azure, GCP, Kubernetes, Terraform, GitHub Actions, CI/CD

RELEVANT EXPERIENCE

Software Engineering Intern, Sedai

July 2026 - Present

- Built Azure Retail Prices REST API ingestion that normalized regional Spot and on-demand records, isolated Linux and Windows meters, rejected invalid prices, and recovered throttled pages through bounded retries.
- Extended SQLAlchemyModel and PostgreSQL/TimescaleDB persistence with Alembic migrations and catalog placeholders for later metadata enrichment.
- Added fixture-backed pytest coverage and GitHub Actions validation for Python, Ruff, and TypeScript across a shared monorepo.
- Built a GitOps delivery path for an existing Java/Spring Boot pricing service: Maven tests, Docker, ECR images, Helm, Argo CD, and EKS validation.
- Deployed and validated five Dockerized API, UI, and scraper services on GKE with Terraform, Kustomize, and persistent TimescaleDB.

Software Development Engineer, Augesys

March 2026 - Present

- Built a full-stack Microsoft Entra validation workflow with FastAPI, React, Microsoft Graph, OPA/Rego, and explainable policy results.
- Designed a manifest-driven DAG engine for API collection, transformations, normalized artifacts, and downstream policy evaluation.
- Built reusable Graph clients and fan-out collection handlers with structured error handling for missing tokens and external-service failures.
- Developed React/Vite views for progress polling, persisted results, and policy-level explanations.
- Implemented server-side OAuth/OIDC with MSAL, tenant allowlisting, cached token acquisition, and token-expiry checks.

Software Development Intern, IpserLabs

January 2025 - May 2025

- Led an asynchronous Python, RabbitMQ, and S3 document-processing pipeline that decoupled OCR and LLM extraction for a web app.
- Reduced ingestion failures by 23% with AJV validation and strict JSON Schema contracts for extracted output.

Software Engineer, Wipro

July 2021 - August 2023

- Reduced FedEx issue-resolution time by 38% by designing 10+ HTML5/CSS3 shipment-tracking components for support agents.
- Built a shipping-document workflow with browser PDF previews and automated email delivery; contributed through Agile/Scrum and CI checks.
- Improved Farmers Insurance CRM data integration, reducing redundancy by 21% across more than 1M customer records.

OPEN SOURCE CONTRIBUTIONS

Core Contributor, Boston Liquor License Tracker

- Reduced licensing-board update time from 15 minutes to 5 seconds by automating PDF discovery, applicant extraction, JSON updates, validation, and pull-request creation with GitHub Actions.

SELECT PROJECTS

- **Visual Objects:** Built a React/TypeScript and Flask web app with PostgreSQL/SQLAlchemy persistence for editable image annotations and exports; integrated automatic detections with user correction and deployed the web application with Docker, Nginx, and GitHub Actions.

EDUCATION

- MS in Software Engineering Systems, Northeastern University September 2023 - December 2025
- BTech in Electrical/Electronics Engineering, College of Engineering Trivandrum September 2017 - May 2021
